1. Application

This Specification is applicable to 9.36cm (3.7 inch) Blanview TFT-LCD monitor for non-military use.

- ORTUS TECHNOLOGY makes no warranty or assume no liability that use of this Product and/or any information including drawings in this Specification by Purchaser is not infringing any patent or other intellectual property rights owned by third parties, and ORTUS TECHNOLOGY shall not grant to Purchaser any right to use any patent or other intellectual property rights owned by third parties. Since this Specification contains ORTUS TECHNOLOGY's confidential information and copy right, Purchaser shall use them with high degree of care to prevent any unauthorized use, disclosure, duplication, publication or dissemination of ORTUS TECHNOLOGY'S confidential information and copy right.
- If Purchaser intends to use this Products for an application which requires higher level of reliability and/or safety in functionality and/or accuracy such as transport equipment (aircraft, train, automobile, etc.), disaster-prevention/security equipment or various safety equipment, Purchaser shall consult ORTUS TECHNOLOGY on such use in advance.
- O This Product shall not be used for application which requires extremely higher level of reliability and/or safety such as aerospace equipment, telecommunication equipment for trunk lines, control equipment for nuclear facilities or life-support medical equipment.
- ORTUS TECHNOLOGY assumes no liability for any damage resulting from misuse, abuse, and/or miss-operation of the Product deviating from the operating conditions and precautions described in the Specification.
- ◎ If any issue arises as to information provided in this Specification or any other information, ORTUS TECHNOLOGY and Purchaser shall discuss them in good faith and seek solution.
- ◎ ORTUS TECHNOLOGY assumes no liability for defects such as electrostatic discharge failure occurred during peeling off the protective film or Purchaser's assembly process.

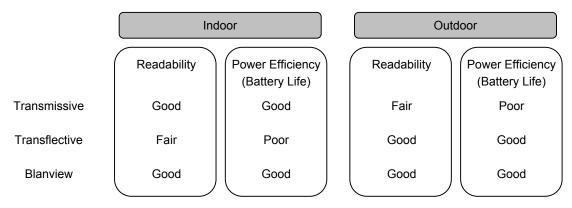

◎ This Product is compatible for RoHS directive.

| Object substance | Maximum content [ppm] |
|--|-----------------------|
| Cadmium and its compound | 100 |
| Hexavalent Chromium Compound | 1000 |
| Lead & Lead compound | 1000 |
| Mercury & Mercury compound | 1000 |
| Polybrominated biphenyl series (PBB series) | 1000 |
| Polybrominated biphenyl ether series (PBDE series) | 1000 |

Issue: Dec. 5, 2011

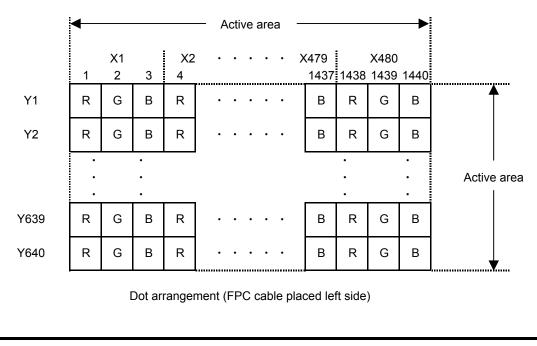

2. Outline Specifications

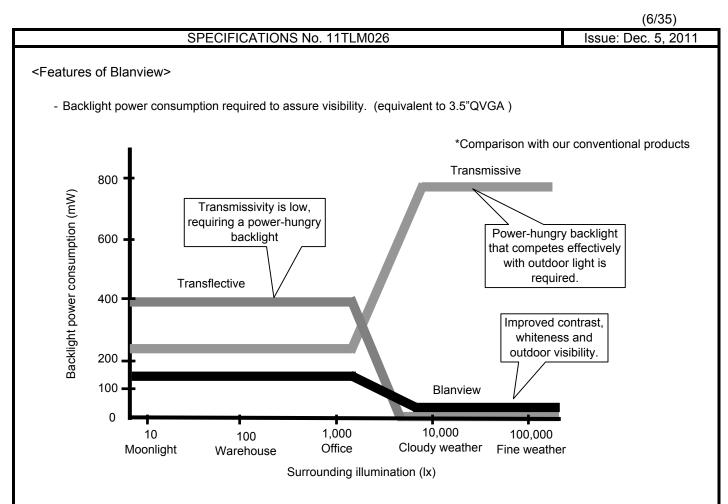

- 2.1 Features of the Product
 - 3.7 inch diagonal display, 1440 [H] x 640 [V] dots.
 - 6-bit / 262,144 colors.
 - Timing generator [TG], Counter-electrode driving circuitry, Built-in power supply circuit.
 - Power save (Standby) mode capable.
 - Long life & High bright white LED back-light and Touch panel operation monitor..
 - Blanview TFT-LCD, improved outdoor readability.

2.2 Display Method

| Items | Specifications | Remarks |
|---------------------|------------------------------------|----------------------------|
| Display type | 262,144 colors. | |
| | Blanview, Normally black. | |
| Driving method | | |
| | Line-scanning, Non-interlace. | |
| Dot arrangement | RGB stripe arrangement. | Refer to "Dot arrangement" |
| Signal input method | 6-bit RGB,parallel input. | |
| Backlight type | Long life & High bright white LED. | |
| Touch panel | Surface finishing:Clear | |

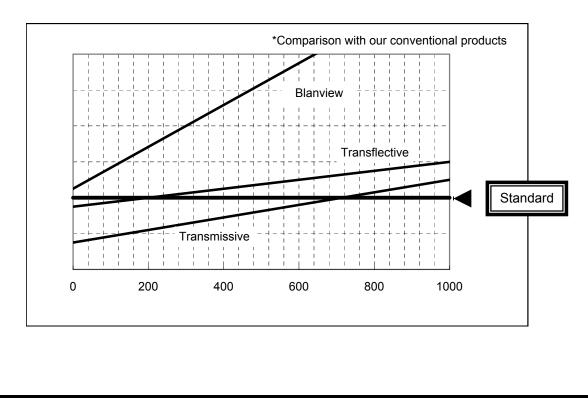

- Contrast characteristics under 100,000lx. (same condition as direct sunlight.)

With better contrast (higher contrast ratio), Blanview TFT-LCD has the best outdoor readability in three different types of TFT-LCD.

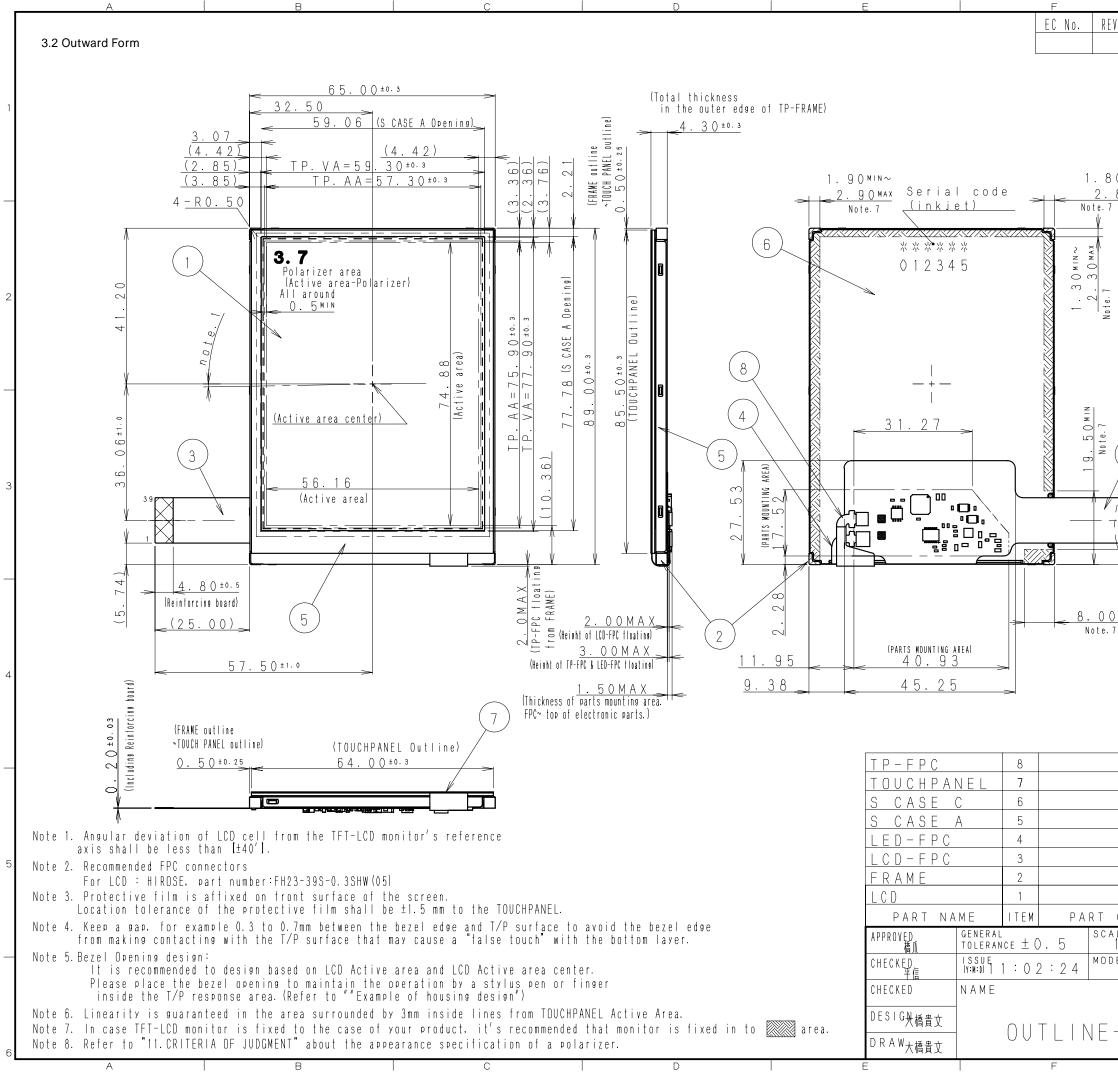

Below chart shows contrast value against panel surface brightness. (Horizontal: Panel surface brightness/ Vertical: Contrast value) LCD panel has enough outdoor readability above our Standard line.

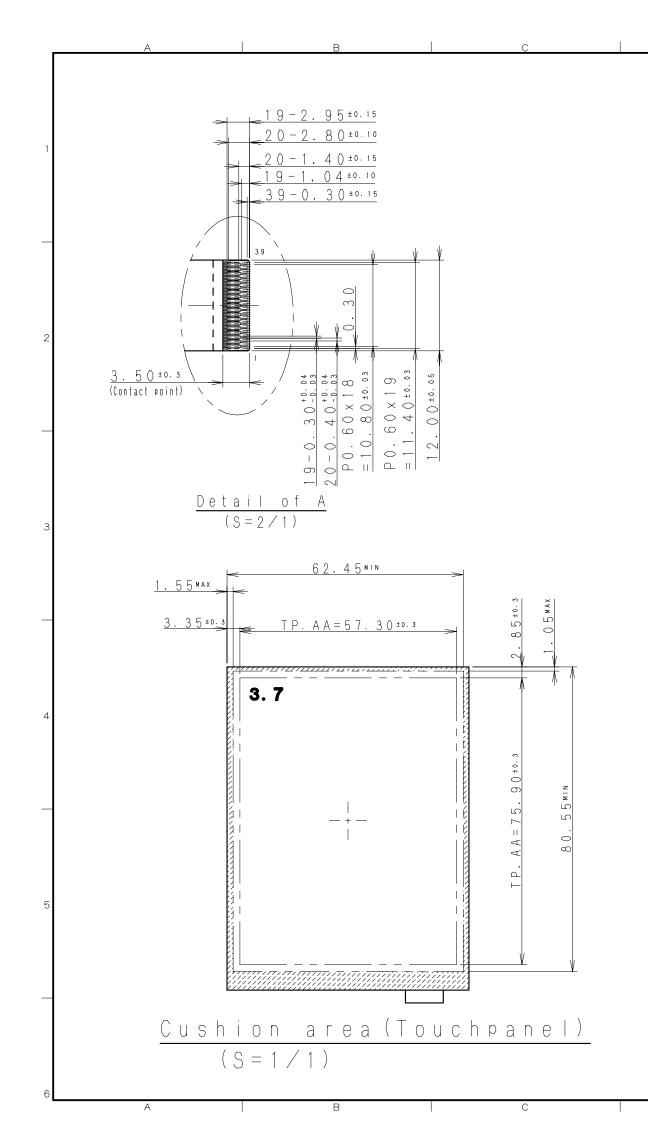

3. Dimensions and Shape

3.1 Dimensions

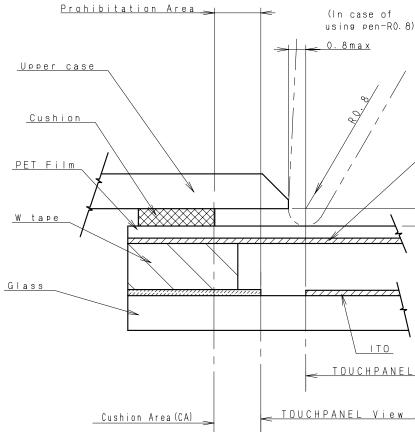

| Items | Specifications | Unit | Remarks |
|---------------------|-------------------------------|------|---------------------------------------|
| Outline dimensions | 65.00[H] × 89.00[V] × 4.30[D] | mm | Exclude FPC cable and |
| | | | parts on FPC. |
| Active area | 56.16[H] × 74.88[V] | mm | 9.36cm diagonal |
| Number of dots | 1440[H] × 640[V] | dot | |
| Dot pitch | 39.0[H] × 117.0[V] | um | |
| Hardness of | 3 | Н | Load:4.9N,Angle:45° |
| Touch Panel surface | | | Reference judgment standard:JIS-K5600 |
| Weight | 43.0 | g | Include FPC cable |

3.3 Serial No. print (S-print)

1) Display Items

S-print indicates the least significant digit of manufacture year (1digit), manufacture month with below alphabet (1letter), model code (5characters), serial number (6digits).

| | Contents of display | | | | | | | |
|---|---|--------------------------|-------|-------|--|--|--|--|
| а | The least significant digit of manufacture year | | | | | | | |
| b | Manufacture month Jan-A May-E Sep-I | | | | | | | |
| | | Feb-B | Jun-F | Oct-J | | | | |
| | | Mar-C | Jul-G | Nov-K | | | | |
| | | Apr-D | Aug-H | Dec-L | | | | |
| С | Model code | 37ARC (Made in Japa | n) | | | | | |
| | | 37ASC (Made in Malaysia) | | | | | | |
| | | 37ATC (Made in China) | | | | | | |
| d | Serial number | | | | | | | |

* Example of indication of Serial No. print (S-print)

•Made in Japan

1H37ARC000125

means "manufactured in August 2011, 3.7" AR type, C specifications, serial number 000125"

·Made in Malaysia

1H37ASC000125

means "manufactured in August 2011, 3.7" AS type, C specifications, serial number 000125"

Made in China

1H37ATC000125

means "manufactured in August 2011, 3.7" AT type, C specifications, serial number 000125"

2) Location of Serial No. print (S-print) Refer to 3.2 "Outward Form".

3)Others

Please note that it is likely to disappear with an organic solvent about the Serial print.

4. Pin Assignment

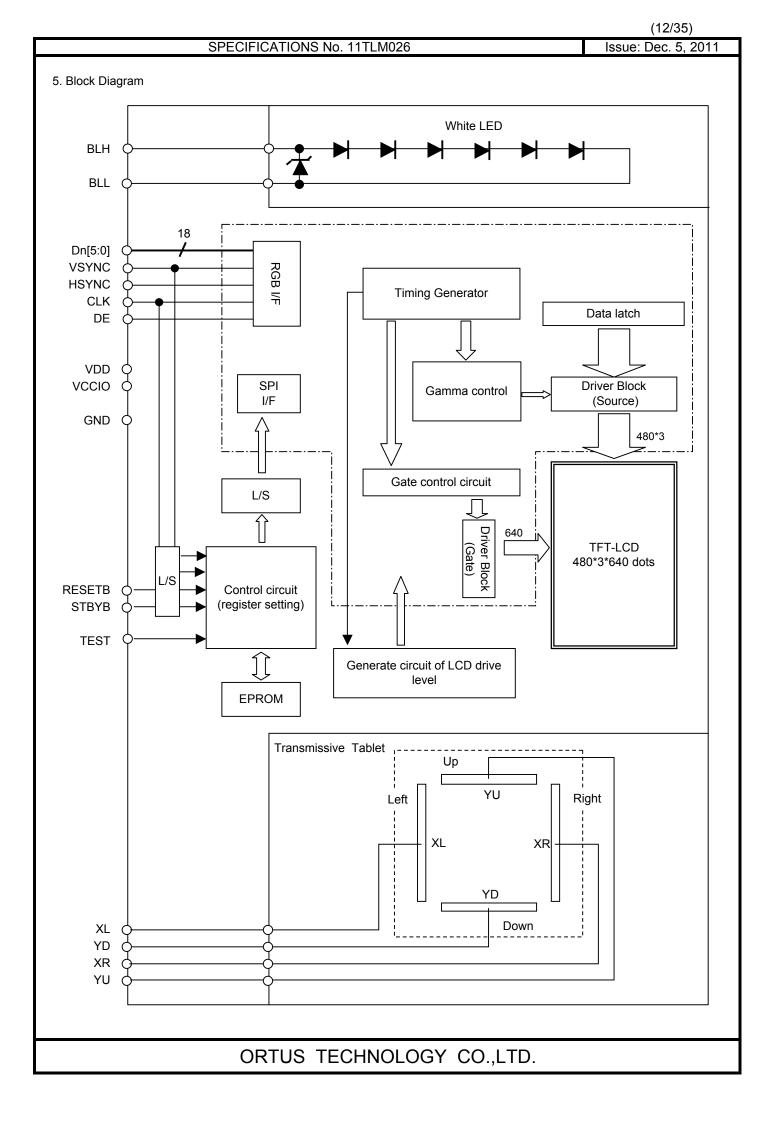

| No. | Symbol | Function | | | | | |
|-----|--------|--|--|--|--|--|--|
| 1 | VSS | Ground | | | | | |
| 2 | VSS | Ground | | | | | |
| 3 | VDD | Power supply input. | | | | | |
| 4 | VCCIO | Logic Interface Power supply input. | | | | | |
| 5 | VSS | Ground | | | | | |
| 6 | RESETB | System reset signal input.(Lo: active) | | | | | |
| 7 | HSYNC | Horizontal sync signal input. (Negative polarity) | | | | | |
| 8 | VSYNC | Vertical sync signal input.(Negative polarity) | | | | | |
| 9 | CLK | Clock input for display. (Data Input on the falling edge) | | | | | |
| 10 | VSS | Ground | | | | | |
| 11 | D00 | Display data input for (B). | | | | | |
| 12 | D01 | 00h for black display | | | | | |
| 13 | D02 | D00:LSB D05:MSB | | | | | |
| 14 | D03 | | | | | | |
| 15 | D04 | Driver IC carries out gamma conversion internally. | | | | | |
| 16 | D05 | | | | | | |
| 17 | D10 | Display data input for (G). | | | | | |
| 18 | D11 | 00h for black display | | | | | |
| 19 | D12 | D10:LSB D15:MSB | | | | | |
| 20 | D13 | | | | | | |
| 21 | D14 | Driver IC carries out gamma conversion internally. | | | | | |
| 22 | D15 | | | | | | |
| 23 | D20 | Display data input for (R). | | | | | |
| 24 | D21 | 00h for black display | | | | | |
| 25 | D22 | D20:LSB D25:MSB | | | | | |
| 26 | D23 | | | | | | |
| 27 | D24 | Driver IC carries out gamma conversion internally. | | | | | |
| 28 | D25 | | | | | | |
| 29 | VSS | Ground | | | | | |
| 30 | DE | Input data effective signal. (It is effective for the period of "H") | | | | | |
| 31 | STBYB | Standby signal (Lo:Standby operation,Hi:Normal operation) | | | | | |
| 32 | TEST1 | Connect to Ground. | | | | | |
| 33 | XL | X-axis left terminal | | | | | |
| 34 | YD | Y-axis downside terminal | | | | | |
| 35 | XR | X-axis right terminal | | | | | |
| 36 | YU | Y-axis upside terminal | | | | | |
| 37 | TEST2 | Connect to Ground. | | | | | |
| 38 | BLH | LED drive power source. (Anode side) | | | | | |
| 39 | BLL | LED drive power source. (Cathode side) | | | | | |

- Recommended connector: HIROSE ELECTRIC FH23 series [FH23-39S-0.3SHW(05)]

- Please make sure to check a consistency between pin assignment in "3.2 Outward Form" and your connector pin assignment when designing your circuit.

Inconsistency in input signal assignment may cause a malfunction.

- Since FPC cable has gold plated terminals, gilt finish contact shoe connector is recommended.

6. Absolute Maximum Rating

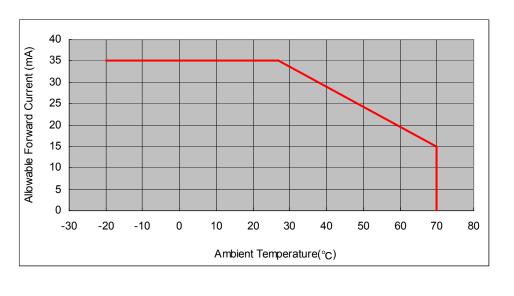

| | | 1 | | | 1 | VSS=0V | |

| | | | | MIN | TYP | MAX | | |
| | Forward current | IL25 | Ta=25 ℃ | _ | 10.0 | 35.0 | mA | BLH – BLL |
| | | IL70 | Ta=70 °C | _ | _ | 15.0 | mA | |
| | Forward voltage | VL | Та=25 °С | _ | 16.8 | 17.4 | V | |
| ^ | | | IL=10.0mA | | | | | |
| A | Estimated Life | LL | Та=25 °С | _ | (50,000) | _ | hr | |
| <u> </u> | of LED | | IL=10.0mA | | | | | |
| | | | Note | | | | | |

Note: - The lifetime of the LED is defined as a period till the brightness of the LED decreases to the half of its initial value.

- This figure is given as a reference purpose only, and not as a guarantee.

- This figure is estimated for an LED operating alone.

As the performance of an LED may differ when assembled as a monitor together with a TFT panel due to different environmental temperature.

- Estimated lifetime could vary on a different temperature and usually higher temperature could reduce the life significantly.

8.1.3 Touch Panel

| | | | | | | | Ta=25° C |

Note: This is recommended spec to get high quality picture on display. It is customer's risk to use out of this frequency.

(20/35)

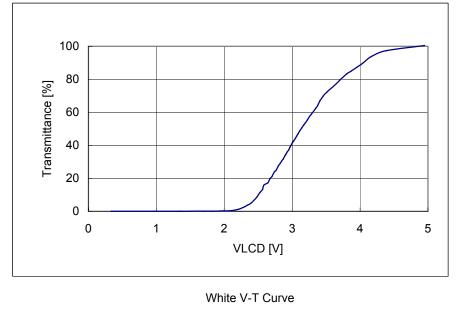

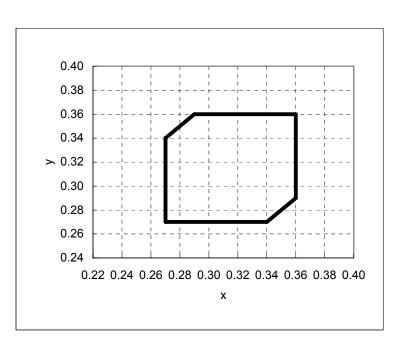

- *2 CLK is used for Gate array CLK on FPC. VSYNC is used for Gate array's inside counter. It becomes the operation after CLK ,VSYNC input.
- *3 After the power supply, Please execute RESETB.
- *4 There is no regulations at time until each signal is supplied from RESETB"H" But meanwhile, It is necessary to fix each signal to "H"or"L".
- *5 It is necessary to supply VSYNC and CLK for 15 frames or more from STBYB "L" to turning off the power supply without leaving the afterimage.

14. Handling Instruction 14.1 Handling Instruction

| | Caution | | | | |
|------|--|--|--|--|--|
| (1) | Do not make an impact on the LCD panel glass because it may break and you may get injured from it. | | | | |
| (2) | If the glass breaks, do not touch it with bare hands. (Fragment of broken glass may stick you or you cut yourself on it. | | | | |
| (3) | If you get injured, receive adequate first aid and consult a medial doctor. | | | | |
| (4) | Do not let liquid crystal get into your mouth. (If the LCD panel glass breaks, try not let liquid crystal get into your mouth even toxic property of liquid crystal has not been confirmed. | | | | |
| (5) | If liquid crystal adheres, rinse it out thoroughly. (If liquid crystal adheres to your cloth or skin, wipe it off with rubbing alcohol or wash it thoroughly with soap. If liquid crystal gets into eyes, rinse it with clean water for at least 15 minutes and consult an eye doctor. | | | | |
| (6) | If you scrap this products, follow a disposal standard of industrial waste that is legally valid in the community, country or territory where you reside. | | | | |
| (7) | Do not connect or disconnect this product while its application products is powered on. | | | | |
| (8) | Do not attempt to disassemble or modify this product as it is precision component. | | | | |
| (9) | If a part of soldering part has been exposed, and avoid contact (short-circuit) with a metallic part of the case etc. about FPC of this model, please. Please insulate it with the insulating tape etc. if necessary. The defective operation is caused, and there is a possibility to generation of heat and the ignition. | | | | |
| (10) | Since excess current protection circuit is not built in this TFT module, there is the possibility that LCD module or peripheral circuit become feverish and burned in case abnormal operation is generated. We recommend you to add excess current protection circuit to power supply. | | | | |
| (11) | The end part of glass and film of touch panel has conductivity, and avoid contact (short-circuit) with electroconductive case etc There is a possibility of setting up a defective touch panel, and insulate it for the case suppression (cushion etc.) if necessary, please. | | | | |
| (12) | The devices on the FPC are damageable to electrostatic discharge, because the terminals of the devices are exposed. Wear grounded wrist-straps and use electrostatic neutralization blowers to prevent static charge and discharge when handling the TFT monitors. Designate an appropriate operating area, and set equipment, tools, and machines properly when handling this product. | | | | |
| | Caution This mark is used to indicate a precaution or an instruction which, if not correctly observed, may result in bodily injury, or material damages alone. | | | | |

14.2 Precautions for Handling

- Wear finger tips at incoming inspection and for handling the TFT monitors to keep display quality and keep the working area clean.
 Do not touch the surface of the monitor as it is easily scratched.
- Wear grounded wrist-straps and use electrostatic neutralization blowers to prevent static charge and discharge when handling the TFT monitors as the LED in this TFT monitors is damageable to electrostatic discharge. Designate an appropriate operating area, and set equipment, tools, and machines properly when handling this product.
- 3) Avoid strong mechanical shock including knocking, hitting or dropping to the TFT monitors for protecting their glass parts. Do not use the TFT monitors that have been experienced dropping or strong mechanical shock.
- 4) Do not use or storage the TFT monitors at high temperature and high humidity environment. Particularly, never use or storage the TFT monitors at a location where condensation builds up.
- 5) Avoid using and storing TFT monitors at a location where they are exposed to direct sunlight or ultraviolet rays to prevent the LCD panels from deterioration by ultraviolet rays.
- 6) Do not stain or damage the contacts of the FPC cable .
 FPC cable needs to be inserted until it can reach to the end of connector slot.
 During insertion, make sure to keep the cable in a horizontal position to avoid an oblique insertion.
 Otherwise, it may cause poor contact or deteriorate reliability of the FPC cable.
- 7) The FPC cable is a design very weak to the bend and the pull as it is fixed with the tape. Do not bend or pull the FPC cable or carry the TFT monitor by holding the FPC cable.
- Peel off the protective film on the TFT monitors during mounting process. Refer to the section 14.5 on how to peel off the protective film. We are not responsible for electrostatic discharge failures or other defects occur when peeling off the protective film.

14.3 Precautions for Operation

- Since this TFT monitors are not equipped with light shielding for the driver IC, do not expose the driver IC to strong lights during operation as it may cause functional failures.
- 2) When turning off the power, turn off the input signal before or at the same timing of switching off the power.
- Do not plug in or out the FPC cable while power supply is switch on. Plug the FPC cable in and out while power supply is switched off.
- 4) Do not operate the TFT monitors in the strong magnetic field. It may break the TFT monitors.
- 5) Do not display a fixed image on the screen for a long time. Use a screen-saver or other measures to avoid a fixed image displayed on the screen for a long time. Otherwise, it may cause burn-in image on the screen due the characteristics of liquid crystal.

Issue: Dec. 5, 2011

14.4 Storage Condition for Shipping Cartons

Storage environment

| • | Temperature | 0 to 40°C |
|---|-------------|--|
| • | Humidity | 60%RH or less |
| | | No-condensing occurs under low temperature with high humidity condition. |
| • | Atmosphere | No poisonous gas that can erode electronic components and/or wiring materials should be detected. |
| • | Time period | 3 months |
| • | Unpacking | To prevent damages caused by static electricity, anti-static precautionary measures (e.g. earthing, anti-static mat) should be implemented. |
| | | |

Maximum piling up 7 cartons

14.5 Precautions for Peeling off the Protective film

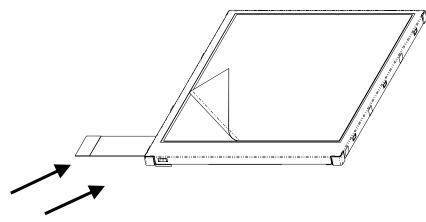

The followings work environment and work method are recommended to prevent the TFT monitors from static damage or adhesion of dust when peeling off the protective films.

A) Work Environment

- a) Humidity: 50 to 70 %RH, Temperature15 to 27 °C
- b) Operators should wear conductive shoes, conductive clothes, conductive finger tips and grounded wrist-straps. Anti-static treatment should be implemented to work area's floor.
- c) Use a room shielded against outside dust with sticky floor mat laid at the entrance to eliminate dirt.

B) Work Method

- The following procedures should taken to prevent the driver ICs from charging and discharging.
- a) Use an electrostatic neutralization blower to blow air on the TFT monitors to its lower left when the FPC cable facing to the leftside.
 Optimize direction of the blowing air and the distance between the TFT monitors and the electrostatic neutralization blower.
- b) Put an adhesive tape (Scotch tape, etc) at the lower left corner area of the protective film to prevent scratch on surface of TFT monitors.
- c) Peel off the adhesive tape slowly (spending more than 2 secs to complete) by pulling it to opposite direction.

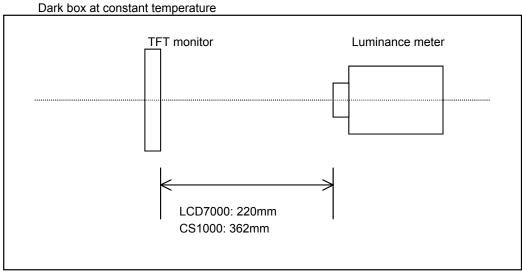

Direction of blowing air (Optimize air direction and the distance)

APPENDIX

Reference Method for Measuring Optical Characteristics and Performance

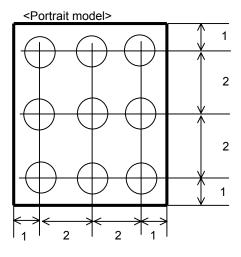

| 1. Measurement Conditio | n (Backlight ON) |
|-------------------------|--|
| Measuring instruments: | CS1000 (KONICA MINOLTA), LCD7000(OTSUKA ELECTRONICS), EZcontrast160D (ELDIM) |
| Driving condition: | Refer to typical rating of the section "Recommended Operating Conditions". |
| Measured temperature: | 25°C unless specified |
| Measurement system: | See the chart below. The luminance meter is placed on the normal line of measurement system. |
| Measurement point: | At the center of the screen unless otherwise specified |

Measurement is made after 30 minutes of lighting of the backlight.

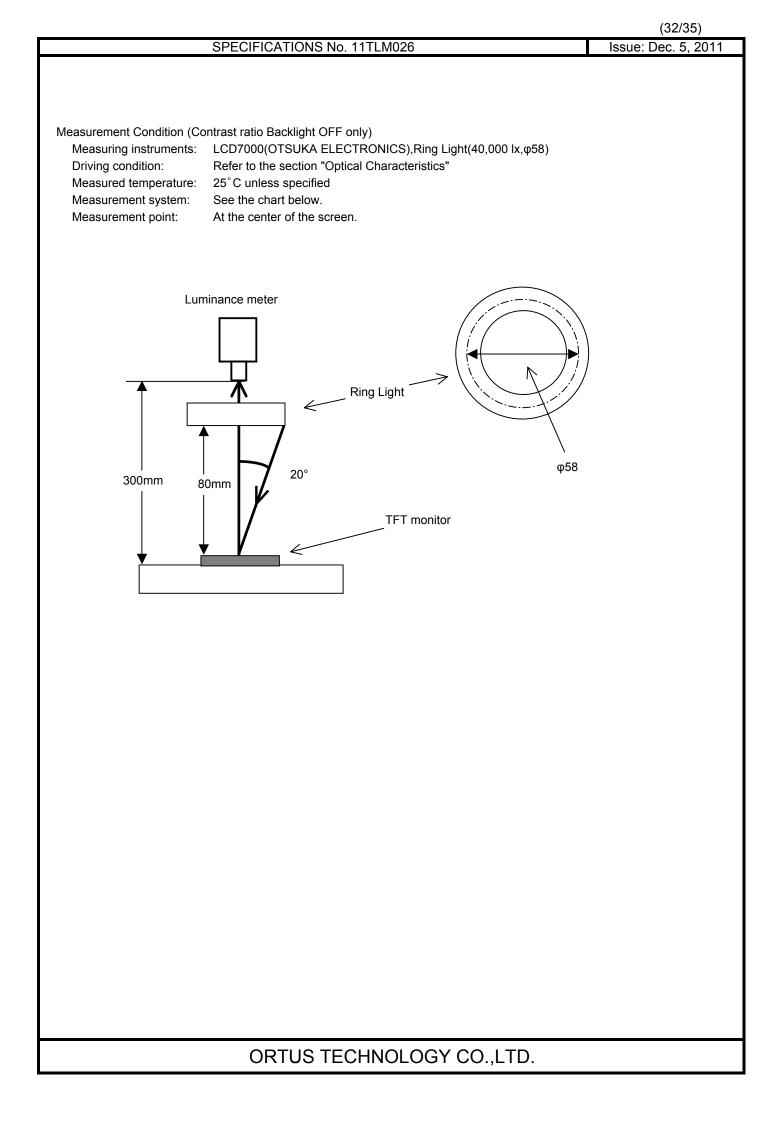

Measurement point:

At the center point of the screen Brightness distribution: 9 points shown in the following drawing.

Dimensional ratio of active area

Backlight IL=10.0mA

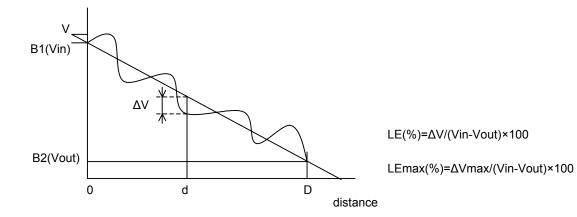

| SPECIFICATIONS No. 11TLM026 | 5 |
|-----------------------------|---|
|-----------------------------|---|

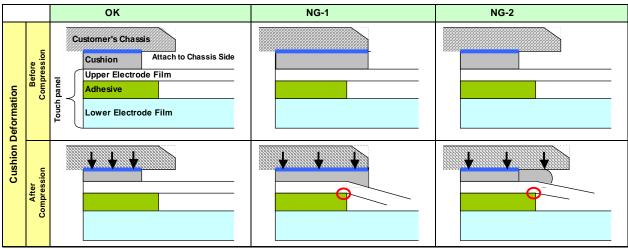

| Notice | Item | Test method | Measuring | Remark |
|--------|--|--|-----------------------|--|
| 1 | Deerer | Measure output signal waveform by the luminance | instrument LCD7000 | Diople discriber |
| 1 | Response time | meter when raster of window pattern is changed from white to black and from black to white. | 1007000 | Black display VLCD=4.7V White display VLCD=0.3V |
| | | Black White Black White brightness | | TON Rise time |
| | | | | TOFF |
| | | 90% 10% 0% Black brightness TON TOFF | | Fall time |
| | | | | |
| 2 | Contrast ratio | Measure maximum luminance Y1(VLCD=4.7V) and minimum luminance Y2(VLCD=0.3V) at the center of the screen by displaying raster or window pattern. Then calculate the ratio between these two values. Contrast ratio = Y1/Y2 Diameter of measuring point: 8mmφ | CS1000 LCD7000 | Backlight ON Backlight OFF |
| 3 | Viewing angle Horizontalθ Verticalφ | Move the luminance meter from right to left and up and down and determine the angles where contrast ratio is 10. | EZcontrast160D | |
| 4 | V-T threshold value | Change the VLCD by 0.1V step and measure module brightness. VLCD, where the brightness is 90%, 50%, and 10% of the maximum value ,is defined as V90, V50, and V10 respectively. 100% 90% 50% 10% 0 V10 V50 V90 VI CD | LCD7000 | |
| 5 | White chromaticity | VLCD Measure chromaticity coordinates x and y of CIE1931 colorimetric system at VLCD = 4.7V | CS1000 | |
| | | Color matching faction: 2°view | | |
| | | | | |

| Notice | Item | Test method | Measuring instrument | Remark |
|--------|--------------|---|-------------------------|--------------|
| 6 | Burn-in | Visually check burn-in image on the screen | | At optimized |
| | | after 2 hours of "window display" (VLCD=4.7V/0.3V). | | VCOMDC |
| 7 | Center | Measure the brightness at the center of the screen. | CS1000 | |
| | brightness | | | |
| 8 | Brightness | (Brightness distribution) = 100 x B/A % | CS1000 | |
| | distribution | A : max. brightness of the 9 points | | |
| | | B : min. brightness of the 9 points | | |

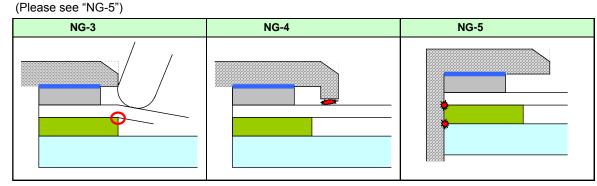

* Linearity Measurement of Touch Panel

- Cautionary instruction to handle a Touch-panel
 - Cushion (between Touch Panel Chassis) Design
 - A cushion is required to be placed between Touch Panel and customer's chassis and there is a designated area to attach it. Attachment at area inside Input Prohibition Area must be forbidden. If cushion was located inside Input Prohibition Area, Upper Electrode may be push constantly and which may cause the electrode breakage at the position falling on the edge of adhesive; it eventually results in Touch Panel malfunction in the future. (Please see "NG-1")
 - Be attention to the cushion material you use. In the case that too soft cushion was used, the cushion may protrude into Prohibition Area by being push strongly; which may result in the electrode breakage. Eventually there is a chance that the electrode breakage leads to the malfunction of Touch Panel in the future. (Please see "NG-2")
 - Cushion is required to be attached at the side of Customer's chassis. Attaching a cushion at the side of Upper Electrode Film has a chance to deform the film and lead to the malfunction of Touch Panel in the future.

- Design Guidance of Chassis (Front Part)
 - Be attention to stay Input Prohibition Area away from touching and/or drawing by a stylus pens in order to avoid the electrode breakage and potential malfunction of Touch Panel. (Please see "NG-3") We recommend customers to design chassis (front case) being able to protect Input Prohibition Area.
 - Clearance between customer's chassis and Touch Panel surface is certainly required in order to avoid erroneous input caused by a collision of the edge of chassis. (Please see "NG-4") A clearance of 0.3 to 0.7mm is recommended.
- Design Guidance of Chassis (Side Part)
 - Upper Electrode and Lower Electrode fall on the edge of Touch Panel outline. Redundant design having enough clearance to avoid electric short with chassis is highly recommended.

- Example of Recommended Chassis Design Refer to "3.2 Outward Form".
- As a terminal resistance has individual specificity, calibration to align the displaying and the sensing position one each is mandatory before use.
