1. Application

This Specification is applicable to 14.4cm (5.7 inch) Blanview TFT-LCD monitor for non-military use.

◎ ORTUS TECHNOLOGY makes no warranty or assume no liability that use of this Product and/or any information
   including drawings in this Specification by Purchaser is not infringing any patent or other intellectual
   property rights owned by third parties, and ORTUS TECHNOLOGY shall not grant to Purchaser any right to use
   any patent or other intellectual property rights owned by third parties. Since this Specification contains
   ORTUS TECHNOLOGY's confidential information and copy right, Purchaser shall use them with high degree of
   care to prevent any unauthorized use, disclosure, duplication, publication or dissemination of
   ORTUS TECHNOLOGY'S confidential information and copy right.

◎ If Purchaser intends to use this Products for an application which requires higher level of reliability
   and/or safety in functionality and/or accuracy such as transport equipment
   (aircraft, train, automobile, etc.), disaster-prevention/security equipment or various safety
   equipment, Purchaser shall consult ORTUS TECHNOLOGY on such use in advance.

◎ This Product shall not be used for application which requires extremely higher level of
   reliability and/or safety such as aerospace equipment, telecommunication equipment for trunk lines,
   control equipment for nuclear facilities or life-support medical equipment.

◎ It must be noted as an mechaniacl design manner, especial attention in housing design to prevent
   arcuation/flexureor caused by stress to the LCD module shall be considered.

◎ ORTUS TECHNOLOGY assumes no liability for any damage resulting from misuse, abuse, and/or
   miss-operation of the Product deviating from the operating conditions and precautions
   described in the Specification.

◎ ORTUS TECHNOLOGY is not responsible for any nonconformities and defects
   that are not specified in this specifications.

◎ If any issue arises as to information provided in this Specification or any other information,
    ORTUS TECHNOLOGY and Purchaser shall discuss them in good faith and seek solution.

◎ ORTUS TECHNOLOGY assumes no liability for defects such as electrostatic discharge failure occurred
   during peeling off the protective film or Purchaser's assembly process.

◎ This Product is compatible for RoHS directive.

2. Outline Specifications

2.1 Features of the Product

- 5.7 inch diagonal display, 1,920 [H] x 480 [V] dots.
- 6-bit 262,144 color display capability.
- Built in Timing generator (TG).
- Long life & High bright white LED back-light.
- Blanview TFT-LCD, improved outdoor readability.

<Features of Blanview>

- Backlight power consumption required to assure visibility. (equivalent to 3.5"QVGA)

*Comparison with our conventional products
- Contrast characteristics under 100,000lx. （same condition as direct sunlight.）

   With better contrast (higher contrast ratio), Blanview TFT-LCD has the best outdoor readability
   in three different types of TFT-LCD.
   Below chart shows contrast value against panel surface brightness. (Horizontal: Panel surface brightness/
   Vertical: Contrast value) LCD panel has enough outdoor readability above our Standard line.

Note 1. Angular deviation of LCD cell from the TFT-LCD monitor's reference axis shall be less than [±50'].
Note 2. S label is affixed the area shown in the drawing.
         The thickness of the S label will be added to that of S case's surface.
Note 3. Protective film is affixed on front surface of the screen.
         Location tolerance of the protective film shall be ±3.0 mm to the TOUCH PANEL.
Note 4. Recommended FPC connectors

         For TP FPC : Kyocera Connector Products, part number: 04 6277 004 001 883+(Dual-sided contact)
         TP FPC pin assigment differs from a position of Datum Pin of recommended FPC connector.
         Please notice the difference when designing your circuit with much care.
Note 5. Exercise care not to apply any forces to the cable holder of the S case A.
Note 6. Indicated area is recommended holding area.
Note 7. Refer to '11.CRITERIA OF JUDGMENT' about the appearance specification of a polarizer and touch panel.
Note 8. Linearity is guaranteed in the area surrounded by 3mm inside lines from TOUCH PANEL Active Area.

Design guidance for the Housing & the cushion

Note 9. Keep a gap, for example 0.3 to 0.7mm between the bezel edge and touch panel surface to avoid the bezel edge from making contacting with the touch panel surface that may cause a "false touch" with the bottom layer.

Note10. Recommended dimensions of housing in case of using pen(R0.8) (refer to "Example of Housing Design")

Note11. Upper case opening
   a. Please place the upper case opening to maintain the operation by a stylus pen inside the TP response area.
   b. The any pressures in the area between TP response area and TP viewing area is prohibited.
   c. Please use the appropriate material(PMMA, PC, etc.) as the upper case.

Note12. Cushion design
   a. Please put the cushion on the upper case.
   b. Do not use an adhesive tape to stick on the TP suface.
   c. Please position the cushion over the cushion area to avoid a short.

- Recommended connector: KYOCERA connector products, 6240 series (04 6240 045 023 846+)
- Please make sure to check a consistency between pin assignment in "3.2 Outward Form" and
  your connector pin assignment when designing your circuit.
  Inconsistency in input signal assignment may cause a malfunction.
- Since FPC cable has gold plated terminals, gilt finish contact shoe connector is recommended.

Estimated Life of LED	LL	Ta=25°C,IL=10.2mA Note	--	(50,000)	--	hr	

Note: - The lifetime of the LED is defined as a period till the brightness of the LED
    decreases to the half of its initial value.
  - This figure is given as a reference purpose only, and not as a guarantee.
  - This figure is estimated for an LED operating alone.
    As the performance of an LED may differ when assembled as a monitor
    together with a TFT panel due to different environmental temperature.
  - Estimated lifetime could vary on a different temperature and usually
    higher temperature could reduce the life significantly.

8. Description of Operation

8.1 Power On/Off Sequence

The sequence of the Power On/Off and the signal input must defend the following conditions.

- Please input the logic signal after turning on VDD.
- Please input AVDD after turning on VDD or at the same time.
- Please input V1, V5, V6, V10 and VCOM voltage after turning on AVDD.
- Please input VGL after turning on VDD.
- Please input VGH after turning on VGL.

Power Off sequence is assumed to be opposite of the above mentioned sequence.

Please refer Power On/Off recommended sequence is shown in the figure below.
8.2 Power On Clear

There is a limitation between Power On and POCB (power on clear) .
Please defend the following conditions.

T>1ms
8.3 "DISP" On/Off Sequence

It explains the Display on/off sequence.
After Display on,"White" data is outputted for 16-Frames first,from the falling edge of the following VSYNC signal.

Signal	
DISP	
VSYNC	1 2 15 16 17
DATA output	INVALID / White(3Fh) / VALID

Step 1. Each product is to be placed in one of the cut-outs of the tray with the display surface facing upward.
(4 products per tray)

Step 2. Each tray is to be piled up in same orientation and the trays be in a stack of 7.
One empty tray is to be put on the top of stack of 7 trays.

Step 3. 2 packs of moisture absobers are to be placed on the top tray as shown in the drawing.
Put piled trays into a sealing bag.
Vacuum and seal the sealing bag with the vacuum sealing machine.

Step 4. The stack of trays in the plastic back is to be inserted into a inner carton.

Step 5. A corrugated board is to be placed on the top and on the bottom of the inner carton.
The two corrugated boards and the inner carton is to be inserted into an outer carton.

Step 6. The outer carton needs to sealed with packing tape as shown in the drawing.
The model number, quantity of products, and shipping date are to be printed on the outer carton.
If necessary, shipping labels or impression markings are to be put on the outer carton.

Step 7. The outer carton is to be inserted into a extra outer carton with same direction.
The extra outer carton needs to sealed with packing tape as shown in the drawing.

Step 8. The model number, quantity of products, and shipping date are to be printed on the extra outer carton.
If necessary, shipping labels or impression markings are to be put on the extra outer carton.
Remark: The return of packing materials is not required.

14. Handling Instruction
   14.1 Cautions for Handling LCD panels

⚠ **Caution**

(1) Do not make an impact on the LCD panel glass because it may break and you may get injured from it.

(2) If the glass breaks, do not touch it with bare hands.
     （Fragment of broken glass may stick you or you cut yourself on it.

(3) If you get injured, receive adequate first aid and consult a medial doctor.

(4) Do not let liquid crystal get into your mouth.
     （If the LCD panel glass breaks, try not let liquid crystal get into your mouth even toxic property
     of liquid crystal has not been confirmed.

(5) If liquid crystal adheres, rinse it out thoroughly.
     （If liquid crystal adheres to your cloth or skin, wipe it off with rubbing alcohol or wash
     it thoroughly with soap. If liquid crystal gets into eyes, rinse it with clean water
     for at least 15 minutes and consult an eye doctor.

(6) If you scrap this products, follow a disposal standard of industrial waste
     that is legally valid in the community, country or territory where you reside.

(7) Do not connect or disconnect this product while its application products is powered on.

(8) Do not attempt to disassemble or modify this product as it is precision component.

(9) If a part of soldering part has been exposed, and avoid contact (short-circuit)
     with a metallic part of the case etc. about FPC of this model, please.
     Please insulate it with the insulating tape etc. if necessary.
     The defective operation is caused, and there is a possibility to generation
     of heat and the ignition.

(10) Since excess current protection circuit is not built in this TFT module, there is the possibility that
     LCD module or peripheral circuit become feverish and burned in case abnormal operation is generated.
     We recommend you to add excess current protection circuit to power supply.

(11) The end part of glass and film of touch panel has conductivity, and avoid contact (short-circuit)
     with electroconductive case etc.. There is a possibility of setting up a defective touch panel,
     and insulate it for the case suppression (cushion etc.) if necessary, please.

⚠ **Caution**   **This mark is used to indicate a precaution or an
instruction which, if not correctly observed, may
result in bodily injury, or material damages alone.**

ORTUS TECHNOLOGY CO.,LTD.

14.2 Precautions for Handling

1) Wear finger tips at incoming inspection and for handling the TFT monitors to keep display quality and keep the working area clean.
   Do not touch the surface of the monitor as it is easily scratched.

2) Wear grounded wrist-straps and use electrostatic neutralization blowers to prevent static charge and discharge when handling the TFT monitors as the LED in this TFT monitors is damageable to electrostatic discharge.
   Designate an appropriate operating area, and set equipment, tools, and machines properly when handling this product.

3) Avoid strong mechanical shock including knocking, hitting or dropping to the TFT monitors for protecting their glass parts. Do not use the TFT monitors that have been experienced dropping or strong mechanical shock.

4) Do not use or storage the TFT monitors at high temperature and high humidity environment.
   Particularly, never use or storage the TFT monitors at a location where condensation builds up.

5) Avoid using and storing TFT monitors at a location where they are exposed to direct sunlight or ultraviolet rays to prevent the LCD panels from deterioration by ultraviolet rays.

6) Do not stain or damage the contacts of the FPC cable .
   FPC cable needs to be inserted until it can reach to the end of connector slot.
   During insertion, make sure to keep the cable in a horizontal position to avoid an oblique insertion.
   Otherwise, it may cause poor contact or deteriorate reliability of the FPC cable.

7) Do not bend or pull the FPC cable or carry the TFT monitor by holding the FPC cable.

8) Peel off the protective film on the TFT monitors during mounting process.
   Refer to the section 14.5 on how to peel off the protective film.
   We are not responsible for electrostatic discharge failures or other defects occur when peeling off the protective film.

14.3 Precautions for Operation

1) Since this TFT monitors are not equipped with light shielding for the driver IC, do not expose the driver IC to strong lights during operation as it may cause functional failures.

2) In case of powering up or powering off this LCD module, be sure to comply the sequence as instructed in this specification.

3) Optimize VCOMDC within recommended operating conditions.
   * When VCOMDC is not an optimal value, flicker and image sticking will be occurred.

4) Do not plug in or out the FPC cable while power supply is switch on.
   Plug the FPC cable in and out while power supply is switched off.

5) Do not operate the TFT monitors in the strong magnetic field. It may break the TFT monitors.

6) Do not display a fixed image on the screen for a long time.
   Use a screen-saver or other measures to avoid a fixed image displayed on the screen for a long time. Otherwise, it may cause burn-in image on the screen due the characteristics of liquid crystal.

ORTUS TECHNOLOGY CO.,LTD.

14.4 Storage Condition for Shipping Cartons

Storage environment
- ・ Temperature   0 to 40°C
- ・ Humidity   60%RH or less
  No-condensing occurs under low temperature with high humidity condition.
- ・ Atmosphere   No poisonous gas that can erode electronic components and/or wiring
  materials should be detected.
- ・ Time period   3 months
- ・ Unpacking   To prevent damages caused by static electricity, anti-static precautionary measures
  (e.g. earthing, anti-static mat) should be implemented.

- ・ Maximum piling up   7 cartons

14.5 Precautions for Peeling off the Protective film

The followings work environment and work method are recommended to prevent the TFT monitors from static damage or adhesion of dust when peeling off the protective films.

A) Work Environment
  a) Humidity: 50 to 70 %RH, Temperature15 to 27°C
  b) Operators should wear conductive shoes, conductive clothes, conductive finger tips
     and grounded wrist-straps. Anti-static treatment should be implemented to work area's floor.
  c) Use a room shielded against outside dust with sticky floor mat laid
   at the entrance to eliminate dirt.

B) Work Method
  The following procedures should taken to prevent the driver ICs from charging and discharging.
  a) Use an electrostatic neutralization blower to blow air on the TFT monitors to
     its lower right when FPC cable placed down.
     Optimize direction of the blowing air and the distance between the TFT monitors
     and the electrostatic neutralization blower.
  b) Peel off the tab slowly (spending more than 2 secs to complete)
     by pulling it to opposite direction.
When FPC cable placed down.　　　　　Direction of blowing air
　　　　　　　　　　　　　　　　　　（Optimize air direction and the distance）

■ Cautionary instruction to handle a Touch-panel

● Cushion (between Touch Panel Chassis) Design
1) A cushion is required to be placed between Touch Panel and customer's chassis and there is a designated area
   to attach it. Attachment at area inside Input Prohibition Area must be forbidden.
   If cushion was located inside Input Prohibition Area, Upper Electrode may be push constantly
   and which may cause the electrode breakage at the position falling on the edge of adhesive;
   it eventually results in Touch Panel malfunction in the future.   (Please see "NG-1")
2) Be attention to the cushion material you use.   In the case that too soft cushion was used,
   the cushion may protrude into Prohibition Area by being push strongly; which may result in the electrode breakage.
   Eventually there is a chance that the electrode breakage leads to the malfunction of Touch Panel in the future.
   (Please see "NG-2")
3) Cushion is required to be attached at the side of Customer's chassis.
   Attaching a cushion at the side of Upper Electrode Film has a chance to deform the film and
   lead to the malfunction of Touch Panel in the future.
● Design Guidance of Chassis (Front Part)
4) Be attention to stay Input Prohibition Area away from touching and/or drawing by a stylus pens in order to
   avoid the electrode breakage and potential malfunction of Touch Panel.   (Please see "NG-3")
   We recommend customers to design chassis (front case) being able to protect Input Prohibition Area.
5) Clearance between customer's chassis and Touch Panel surface is certainly required in order to avoid
   erroneous input caused by a collision of the edge of chassis.   (Please see "NG-4")
   A clearance of 0.3 to 0.7mm is recommended.
● Design Guidance of Chassis (Side Part)
6) Upper Electrode and Lower Electrode fall on the edge of Touch Panel outline.
   Redundant design having enough clearance to avoid electric short with chassis is highly recommended.
   (Please see "NG-5")
● Example of Recommended Chassis Design
   Refer to "3.2 Outward Form".
● As a terminal resistance has individual specificity, calibration to align the displaying and
   the sensing position one each is mandatory before use.
